Outdoor (Acrylic Fabrics)

This is a type of fabric we often use in many parts of our lives. It is made from acrylic fibers which are synthetic polymers. It gives off a soft feeling like cotton. It is easy to wash and doesn't deform with intensive washing. It is highly resistant to chemicals and sunlight. It provides a feeling of warmth and naturalness with its wool-like structure. It is a light fabric that keeps you warm but doesn't make you sweat. Its stain retain rate is quite low. With a 3 year guarantee against fading and impermeability, Acrylic Fabrics are now among your options.

Indoor (Linen)

A natural type of fibrous fabric that consists of linen fibers and obtained from the stem of a plant. We encounter this fabric often in many areas due to its characteristics such as its soft and durable structure, ability to fend off dust, durability, smoothness, resistance to smudge, easy to clean thanks to its ability to retain moisture and absorbing power. Having become the symbol of summer months, the linen will enrich your indoor areas as it is combined with our Aluminum Sofa Suite.

Profile Colors

As you know, the chain is as strong as its weakest link.

Paint application is the weakest link of Metal Garden Furniture. Even if you use the best and thickest pipe, lifetime of your furniture will equal to the lifetime of the paint. The type and brand of the paint you use is important, but what is more important is how prime the metal surface which the paint will adhere on . Lifetime of the applied paint will be limited to months unless the metal surface on which the paint will adhere has adequate quality to hold the paint.

Paint application is the biggest element that brings forward the quality of ERİNÖZ branded products.

Because

Our facility, where we paint garden furniture, provides painting service for prominent brands of white appliances and automotive industry as a CERTIFIED application and service provider.

Preliminary cleaning of parts are conducted and they are taken under painting process with the spray system surface process line, where nano surface process chemicals are used. The products that are painted without the touch of a human hand from the first hanging part on the conveyor until it is put down at the end of the process to ensure high corrosion resistance.

The major property that should be taken into consideration in the choice of paint is POLYSTER structure and UV resistance. Also Lead is steel used in most of the powder paints produced in the sector. These types of paints are both harmful to human health and have negative impact on the environment. Lead-reinforced power paint is not used by any means on ERİNÖZ branded garden furniture.

Differences

Quiet Bearing

We are putting an end to those irritating creaks! We use bearings with steel balls. In this way, we both prevent undesired creaks and provide enjoyable swinging.

Ayarlanabilir Tente Mekanizması

Adjustable Sun Shade Mechanism

You can adjust direction of your sunshade with 5-stage mechanism. You can set the sunshade in any direction easily with this mechanism, which is available on both sides of the upper pipe.

Fortified Seat and Backrest

In order to prevent seat part of our swings that are 200 cm and over, we reinforce the steel mesh used with profile for extra durability.

Kolay Kurulum

Cıvata ve elcik kullanarak hızlı, kolay ve sorunsuz kurulum.

Easy Assembly

Easy and smooth assembly by use of bolt and handle

Ambalajlama şeklimiz / Packaging Type

Tüm aksamlar ve minder tek koli ile sevkedilebilmektedir. Frame, parts, cushions and pillows are packaged and delivered in one box.

Differences

Turning into Bed

With the simple handle mechanism on our swings, you can turn your product into a bed without having to get up and enjoy your swing by lying on it.

Foot Resting

You can have more enjoyable time by breaking your touch to the ground and swinging your feet thanks to its mobile stepping slide that is connected to special slides mounted under the seat.

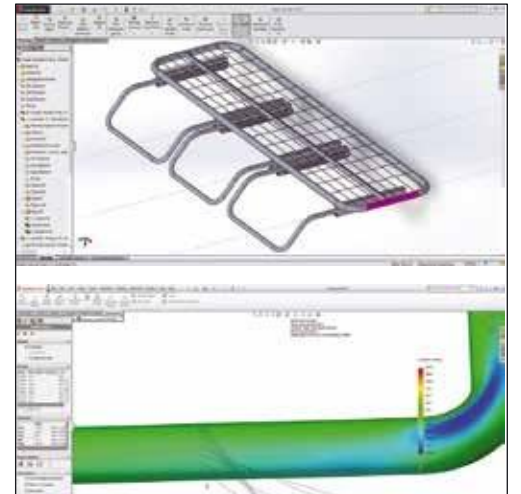

Pipe Diameter

Wall thickness of 1,2 mm is used in Ø51 and Ø 60 pipe thickness while 1,5 mm of wall thickness is used in Ø 70 pipe thickness.

Sponge

The sponge used in our products is grey and has a density of 18D and 26D. It does not contain chemical substances that harm human health. It is in compliance with Reach directives.

CAE

Mükavemet analizini yapıp, doğruluğunu teyit ederiz. We analyze resistance and confirm its accuracy.

Iroko Tree

Iroko tree tones vary between golden color and brown, and its grain of wood is quite remarkable with a lighter tone. Its color changes from yellow to dark brown over time. Iroko tree is a wood that is generally preferred for outdoor use due to its hardness. Iroko is a very decorative and long-lasting tree which is used in outdoor applications that require sturdiness and longevity, in floor coverings, and in garden furniture and boat construction. It is sturdy and decorative and has longevity. It is 100% natural.

Tempered Glass

It has more resistance to breaking when compared to normal glass. While normal glass falls to pieces after breaking and causes injuries, tempered glass is shattered into small and blunt pieces after breaking. Therefore, the risk of injury is minimized. Tempered glass is approximately 5 times more durable than normal glass with equal thickness. It also has more resistance to heat than normal glass.

Aluminum

Strong: We use aluminum in different forms and wall thickness depending on the design and its alloys are even more durable than steel. It is resistant to cold and heat. It doesn't corrode, turn yellow and is sturdy.
Light: It is 3 times lighter than steel, copper and brass. You can carry it without difficulty.
Sustainable Quality: It can be manufactured in high amounts with same quality. It has a delicate tolerance. The same standard of quality can be obtained in all products.
Aesthetic: It can be designed in any shape and painted to any color. Brand new design possibilities provided by unlimited workability and rich variety of colors among which you can select the color you need the most for your place.
Safe: It doesn't release spark and toxic gas during fire.
Environment friendly: It is fully recyclable.

Serge Ferrari

Disassembly

Our products have been turned into a single package by being freed from its large volume by using assembly equipment such as bolts at any point we want due to its stainless structure and without any change in its structure and durability. Aluminum hidden nuts and stainless bolts have been used as assembly equipment and it added an extra stylishness to the design.

Packaging Type
Tüm aksamlar ve minder tek koli ile sevkedilebilmektedir. Frame, parts, cushions and pillows are packaged and delivered in one box.
